EDUCATION

The Chinese University of Hong Kong (Shenzhen), China <i>Master of Data Science: NLP, Reinforcement Learning, Deep Learning, Machine Learning</i>	Sept. 2025 – Present
Shanghai Jiao Tong University, China <i>Bachelor of Engineering in Industrial Engineering</i> <i>Minor in Mathematics and Applied Mathematics</i>	Sept. 2020 – June 2025

INTERNSHIP

Shanghai Artificial Intelligence Laboratory (Research Intern)	Apr. 2026 – Present
- Tracked frontier LLM and LLM-agent capabilities, benchmarks, and safeguards in biosecurity; distilled capability boundaries and risk signals into reusable evaluation and defense strategies. - Built a computational-biology evaluation pipeline covering pathogenicity assessment, structural stability, and virus-receptor binding; contributed to An Early Warning of Emerging Biosecurity Risks in Frontier LLMs by designing and implementing this pipeline.	
Baidu (Research Intern)	July 2024 – June 2025
- Built and cleaned high-quality alignment data and explored fine-tuning strategies to improve LLM reasoning and generation on key business modules. - Tracked AI-agent and LLM-safety advances, produced survey reports, and turned academic methods into engineering optimizations. - Led agent-based multi-turn attack research to expose vulnerabilities in frontier LLMs and propose defenses; first-authored a paper from this work.	

SELECTED PUBLICATIONS

Hua Tang , Chong Zhang, Mingyu Jin, Qinkai Yu, Zhenting Wang, Xiaobo Jin, Yongfeng Zhang, Mengnan Du. Time Series Forecasting with LLMs: Understanding and Enhancing Model Capabilities. Accepted by ACM SIGKDD Explorations , 2024.
Hua Tang , Lingyong Yan, Yukun Zhao, Shuaiqiang Wang, Jizhou Huang, Dawei Yin. GRAF: Multi-turn Jailbreaking via Global Refinement and Active Fabrication. arXiv preprint arXiv:2506.17881 , 2025.

SELECTED PROJECTS

Evaluating LLM Capabilities for Time-Series Forecasting <i>Supervisor: Prof. Mengnan Du, New Jersey Institute of Technology</i>	Jan. 2024 – June 2024
- Evaluated how pre-trained LLMs model seasonal and trend structure in time series, showing strong short-horizon periodicity capture but limited long-horizon extrapolation. - First-authored <i>Time Series Forecasting with LLMs</i>, published in <i>ACM SIGKDD Explorations</i>.	

SELECTED AWARDS & HONORS

1st Prize in 17th “Dongfeng Nissan Cup” Tsinghua IE Sword National Industrial Engineering Case Study Competition (Top 8%)	2022
2nd Prize in 18th National Competition of Transport Science and Technology for Undergraduate Students (NACTranS) (Top 5%)	2023
Meritorious Winner in the Mathematical Contest in Modeling (Top 20%)	2022

SKILLS

Programming: Python, C/C++, SQL, MATLAB, LaTeX, JavaScript
Language: Chinese (Native), English
